### Description

**Chatler Only One Coconut** is a coconut fragrance for women.

Nothing can transport you to a tropical beach faster than the smell of coconut. While many people associate coconut with the smell of sunblock, it's a remarkably nuanced and versatile scent. Coconut perfumes can range from sweet and fruity to beachy and aquatic to bold and sultry. Needless to say, they're usually best suited for casual wear during warm weather, especially summer.

What does coconut smell like?

The scent of coconuts comes primarily from their pulp (the white lining) and water (the liquid inside the coconut). It's a sweet, creamy and slightly exotic smell which is lighter and fresher than what you might expect after smelling sun creams.
